What is claimed is:

- 1: A purified nucleic acid molecule comprising the DNA sequence of SEQ ID NO:2.
- 2. A purified nucleic acid molecule encoding an amino acid sequence comprising the sequence of SEQ ID NO:1.
- 3. A purified nucleic acid molecule that hybridizes to either strand of a denatured, double-stranded DNA comprising the nucleic acid sequence of any one of claims 1 or 2 under conditions of moderate stringency in 50% formamide and 6XSSC, at 42°C with washing conditions of 60°C, 0.5XSSC, 0.1% SDS.
- 4. The purified nucleic acid molecule as claimed in claim 3, wherein said isolated nucleic acid molecule is derived by in vitro mutagenesis from SEQ ID NO:2.
- 5. A purified nucleic acid molecule degenerate from SEQ ID NO:2 as a result of the genetic code.
- 6. A purified nucleic acid molecule, which encodes core+1 polypeptide, an allelic variant of core+1 polypeptide DNA, or a homolog of core+1 polypeptide DNA.
- 7. A recombinant vector that directs the expression of a nucleic acid molecule selected from the group consisting of the purified nucleic acid molecules of claims 1, 2, 5, and 6.
- 8. A recombinant vector that directs the expression of a nucleic acid molecule of claim 3.

- 9. A recombinant vector that directs the expression of a nucleic acid molecule of claim 4.
- 10. A purified polypeptide encoded by a nucleic acid molecule selected from the group consisting of the purified nucleic acid molecules of claims 1, 2, 5, and 6.
- 11. A purified polypeptide according to claim 10 having a molecular weight of approximately 17.5 kD as determined by SDS-PAGE.
- 12. A purified polypeptide according to claim 10 in non-glycosylated form.
- 13. A purified polypeptide encoded by a nucleic acid molecule of claim 3.
- 14. A purified polypeptide according to claim 13 in non-glycosylated form.
- 15. A purified polypeptide encoded by a nucleic acid molecule of claim 4.
- 16. A purified polypeptide according to claim 15 in non-glycosylated form.
- 17. Purified antibodies that bind to a polypeptide of claim 10.
- 18. Purified antibodies according to claim 17, wherein the antibodies are monoclonal antibodies.
- 19. Purified antibodies that bind to a polypeptide of claim13.

- 20. Purified antibodies according to claim 19, wherein the antibodies are monoclonal antibodies.
- 21. Purified antibodies that bind to a polypeptide of claim 15.
- 22. Purified antibodies according to claim 21, wherein the antibodies are monoclonal antibodies.
- 23. A host cell transfected or transduced with the vector of claim 7.
- 24. A method for the production of core+1 polypeptide comprising culturing a host cell of claim 23 under conditions promoting expression, and recovering the polypeptide from the culture medium.
- 25. The method of claim 24, wherein the host cell is selected from the group consisting of bacterial cells, yeast cells, plant cells, and animal cells.
- 26. A host cell transfected or transduced with the vector of claim 8.
- 27. A method for the production of core+1 polypeptide comprising culturing a host cell of claim 26 under conditions promoting expression, and recovering the polypeptide from the culture medium.
- 28. The method of claim 27, wherein the host cell is selected from the group consisting of bacterial cells, yeast cells, plant cells, and animal cells.

CAN, HENDERSON, ABOW, GARRETT, DUNNER, L. L.P. O I STREET, N. W. INGTON, DC 20005 02-408-4000

- 29. A host cell transfected or transduced with the vector of claim 9.
- 30. A method for the production of core+1 polypeptide comprising culturing a host cell of claim 29 under conditions promoting expression, and recovering the polypeptide from the culture medium.
- 31. The method of claim 30, wherein the host cell is selected from the group consisting of bacterial cells, yeast cells, plant cells, and animal cells.
- 32. A plasmid selected from the group consisting of pHPI 600, pHPI 643, pHPI 644, pHPI 663, and pHPI 668.
- 33. An immunological complex comprising a core+1 polypeptide of HCV and an antibody that specifically recognizes said polypeptide.
- 34. A method for detecting infection by hepatitis C virus (HCV), wherein the method comprises providing a composition comprising a biological material suspected of being infected with HCV, and assaying for the presence of core+1 polypeptide of HCV.
- 35. The method as claimed in claim 34, wherein the core+1 polypeptide is assayed by electrophoresis or by immunoassay with antibodies that are immunologically reactive with the core+1 polypeptide.
- 36. An in vitro diagnostic method for the detection of the presence or absence of antibodies, which bind to an antigen

comprising core+1 polypeptide, wherein the method comprises contacting the antigen with a biological fluid for a time and under conditions sufficient for the antigen and antibodies in the biological fluid to form an antigen-antibody complex, and detecting the formation of the complex.

- 37. The method as claimed in claim 36, which further comprises measuring the formation of the antigen-antibody complex.
- 38. The method as claimed in claim 36, wherein the formation of antigen-antibody complex is detected by immunoassay based on Western blot technique, ELISA, indirect immunofluorescence assay, or immunoprecipitation assay.
- 39. A diagnostic kit for the detection of the presence or absence of antibodies, which bind to core+1 polypeptide or mixtures thereof, wherein the kit comprises an antigen comprising core+1 polypeptide or mixtures of core+1 polypeptides, and means for detecting the formation of immune complex between the antigen and antibodies, wherein the means are present in an amount sufficient to perform said detection.
- 40. An immunogenic composition comprising at least one core+1 polypeptide in an amount sufficient to induce an immunogenic or protective response *in vivo*, and a pharmaceutically acceptable carrier therefor.

- 41. The immunogenic composition as claimed in claim 40, wherein said composition comprises a neutralizing amount of at least one core+1 polypeptide.
- 42. A method for detecting the presence or absence of hepatitis C virus (HCV) comprising:
 - (1) contacting a sample suspected of containing viral genetic material of HCV with at least one nucleotide probe, and
- (2) detecting hybridization between the nucleotide probe and the viral genetic material in the sample, wherein said nucleotide probe is complementary to the full-length sequence of the purified nucleic acid of SEQ ID NO:2.
